

**Variable in the
Denominator
of a Fraction**

Strategy: Set the denominator equal to 0 and solve. The domain is everything except that number.

**Both: Variable
in a Square
Root in the
Denominator**

Strategy: Set the inside of the square root strictly greater than 0 and solve.

**Variable in a
Square Root**

Strategy: Set the inside of the square root greater than or equal to 0 and solve.

**Neither: No
Variable in a
Square Root or in
a Denominator**

Strategy: There is no problem, so the domain is everything.
